

# Website User Guide

A practical guide for using the admin website: login, contacts, templates, campaigns, reports, settings, users, and subscriber unsubscribe/preference pages.

**APPLICATION**

Email Campaign Platform

**AUDIENCE**

Admin users and reviewers

**STATUS**

Current repo guide

## 1. Open the Website

For local use, start the backend and frontend, then open the website in a browser.

| Service      | Local URL                    | Purpose                      |
|--------------|------------------------------|------------------------------|
| Web app      | http://localhost:5173        | Main admin website.          |
| API          | http://localhost:4000        | Backend used by the website. |
| Health check | http://localhost:4000/health | Confirms the API is running. |

If login or pages do not load, first confirm the API is running and the database has been migrated and seeded.

## 2. Demo Login Accounts

| Role             | Email                      | Password  | Access                                                                    |
|------------------|----------------------------|-----------|---------------------------------------------------------------------------|
| Super Admin      | manapuramshiri17@gmail.com | Admin@123 | Full access, including organisation settings and user management.         |
| Campaign Manager | yasalapun@gmail.com        | Admin@123 | Can manage contacts, templates, campaigns, suppression list, and reports. |
| Viewer           | nikhilyasalapu77@gmail.com | Admin@123 | Read-only access to dashboard and analytics.                              |

### 3. Login, Logout, and Password Reset

---

#### Sign In

1. Open `/login` or the website home page.
2. Enter your email and password.
3. Select **Sign in**.
4. After successful login, the app opens the Dashboard.

#### Forgot Password

1. On the login page, select **Forgot password?**.
2. Enter the admin email address.
3. Select **Send reset link**.
4. In development mode, the reset token is displayed on screen.
5. Open `/reset-password`, paste the token, enter the new password, and submit.

#### Logout

Use the **Logout** button in the top bar. This ends the local session and returns you to login.

### 4. Navigation and Roles

---

The left sidebar shows only the modules available to the signed-in user.

| Page                  | Super Admin | Campaign Manager | Viewer |
|-----------------------|-------------|------------------|--------|
| Dashboard / Analytics | Yes         | Yes              | Yes    |
| Contacts              | Yes         | Yes              | No     |
| Templates             | Yes         | Yes              | No     |
| Campaigns             | Yes         | Yes              | No     |
| Suppression           | Yes         | Yes              | No     |
| Organisation          | Yes         | No               | No     |
| Users                 | Yes         | No               | No     |
| Profile               | Yes         | Yes              | Yes    |

If a user opens a restricted URL, the website shows an **Access Restricted** message.

## 5. Dashboard and Analytics

---

The Dashboard gives a quick view of campaign operations.

- Review total contacts and sending metrics.
- Check open rate, click rate, bounce rate, complaint rate, and unsubscribe activity.
- Use Analytics for a higher-level performance view across campaigns.

Viewer users should use Dashboard and Analytics to inspect performance without editing campaign data.

## 6. Contacts

---

Use Contacts to create lists, add contacts, import CSV files, segment audiences, view contact history, and export list contacts.

### Create a Contact List

1. Open **Contacts**.
2. Enter a list name and description.
3. Select **Create List**.
4. Select the list from the list selector to make it active.

### Add One Contact

1. Choose the target list.
2. Enter email, first name, and last name.
3. Select **Save Contact**.

### Import Contacts from CSV

1. Open **Contacts**, then select **Import Screen**, or open `/contacts/import`.
2. Choose the target list.
3. Paste CSV text with an email column. Example: `email,first_name,last_name`.
4. Select **Preview** to check rows and column mapping.
5. Select **Import** to save valid contacts.

### Search, Sort, and Bulk Update

- Use search to find contacts by email or name.
- Sort by subscribed date, email, or first name.
- Select contacts, choose a status, then use **Bulk Update Status**.
- Select contacts and use **Bulk Remove from List** when they should no longer belong to that list.

## Contact Detail

Select a contact email or **View** to open contact details. The detail view shows profile fields, list memberships, status, custom fields, and event history.

## Segments

1. Open **Segments Screen** or /contacts/segments.
2. Enter a segment name.
3. Select the operator: **AND** means all conditions must match, **OR** means any condition can match.
4. Add rules such as `custom.city equals Chennai`.
5. Select **Create Segment**.

## 7. Templates

---

Use Templates to create reusable email designs for campaigns.

### Template Library

1. Open **Templates**.
2. Review existing templates by name and category.
3. Select **Create Template** to add a new template.
4. Select **Edit** to open the template editor.
5. Use **Duplicate** to copy a template or **Delete** to remove one.

### Template Editor

The editor has two modes: **Blocks** and **HTML**.

- Blocks mode supports header, text, image, button, divider, spacer, two-column, three-column, social, footer, and custom HTML blocks.
- HTML mode lets you edit raw email HTML directly.
- Use merge tags such as `{{first_name}}`, `{{last_name}}`, `{{email}}`, `{{custom.company}}`, `{{custom.city}}`, and `{{unsubscribe_link}}`.
- Use Desktop and Mobile preview to check the email layout.
- Select **Save Template** after editing.

Always include an unsubscribe link in marketing emails. The available merge tag is `{{unsubscribe_link}}`.

## 8. Campaigns

---

Use Campaigns to create, send, schedule, pause, resume, cancel, duplicate, and report on campaigns.

### Create a Campaign from the Campaigns Page

1. Open **Campaigns**.
2. Fill campaign name, subject, preview text, from name, from email, reply-to email, timezone, and tags.
3. Choose a template.
4. Select recipient lists that will be used when sending.
5. Select **Create Campaign**.

### Create a Campaign with the Wizard

1. Select **New Campaign Wizard**.
2. **Details:** enter campaign identity, sender fields, subject, preview text, timezone, and tags.

3. **Recipients:** select contact lists, optional exclusions, or a segment. Use **Estimate Recipients** before continuing.
4. **Design:** choose a template, or open the template editor if the design needs changes.
5. **Review:** send a test email, then choose **Send Now** or **Schedule**.

## Campaign Actions

| Action         | When to Use It                                        |
|----------------|-------------------------------------------------------|
| Edit           | Update a draft campaign before sending.               |
| View Report    | Open campaign analytics and recipient event data.     |
| Duplicate      | Create a copy of a previous campaign.                 |
| Test           | Send a test version to selected test email addresses. |
| Send Now       | Start sending immediately to selected recipients.     |
| Schedule       | Set a future send date and time.                      |
| Pause / Resume | Temporarily stop or continue a sending campaign.      |
| Cancel         | Stop a campaign that should not continue.             |
| Delete         | Remove a campaign record when allowed.                |

## 9. Campaign Reports

---

Open a report from the Campaigns table by selecting **View Report**.

- Review delivery, open, click, bounce, complaint, and unsubscribe metrics.
- Inspect recipient-level engagement events.
- Use **Export CSV** to download report data for offline analysis.

## 10. Suppression List

---

The suppression list prevents unwanted or unsafe sends.

1. Open **Suppression**.
2. Add an email address.
3. Choose the reason: bounced, complained, unsubscribed, or manual.
4. Select **Add Entry**.
5. Use **Remove** only when the address should be allowed again.

Do not remove bounce, complaint, or unsubscribe entries unless you have a valid business reason and permission.

## 11. Organisation Settings

---

Only Super Admin users can access Organisation settings.

- Update organisation name and logo URL.
- Configure default sender email, AWS region, and SES configuration set.
- Select **Save Settings** after making changes.

## 12. User Management

---

Only Super Admin users can manage other admin users.

1. Open **Users**.
2. Review the current user list.
3. Enter name, email, role, and temporary password for a new teammate.
4. Select **Invite teammate**.
5. Use **Refresh** to reload the users table.

Available roles are **Super Admin**, **Campaign Manager**, and **Viewer**.

## 13. Profile

---

Every signed-in admin can update their profile.

1. Open **Profile**.
2. Edit name or email and select **Save profile**.
3. To change password, enter the current password and new password.
4. Select **Update password**.

## 14. Subscriber Pages

---

Subscribers do not log in. They use unique links inside received emails.

| Page                 | Purpose                                            |
|----------------------|----------------------------------------------------|
| /unsubscribe?uid=... | Lets a recipient unsubscribe from campaign emails. |
| /preferences?uid=... | Lets a recipient manage email preferences.         |

Campaign emails should include the unsubscribe link merge tag so recipients can opt out.

## 15. Recommended End-to-End Usage Flow

---

1. Sign in as Super Admin or Campaign Manager.
2. Create or import contacts into a contact list.
3. Create segments if you need targeted audiences.
4. Create or edit an email template.
5. Create a campaign and select the template.
6. Select recipient lists or a segment.
7. Send a test email.
8. Send now or schedule for later.
9. Monitor campaign progress and reports.
10. Review bounces, complaints, unsubscribes, and suppression entries.

## 16. Quick Troubleshooting

---

| Problem       | What to Check                                                                   |
|---------------|---------------------------------------------------------------------------------|
| Cannot log in | Confirm API is running, database is seeded, and the email/password are correct. |

|                                   |                                                                                              |
|-----------------------------------|----------------------------------------------------------------------------------------------|
| Page says Access Restricted       | The signed-in role does not have permission for that module.                                 |
| Contacts or campaigns do not load | Check API health and browser network errors.                                                 |
| CSV import fails                  | Confirm the CSV has an email column and valid email addresses.                               |
| Send Now or Schedule fails        | Confirm recipients are selected and email/queue settings are configured for the environment. |
| Images do not upload              | Confirm S3 settings are configured when using production storage.                            |
